

Keane Optimum Mobile

Critical patient data when and where you need it.

With Keane Optimum Mobile caregivers can connect to critical patient data, anywhere, anytime. A cloud-based model, Optimum Mobile gives users the tools and technology to access Keane Optimum, a certified electronic health record (EHR) solution for acute care facilities.

On-demand Access to Patient Information

Optimum Mobile uses the latest technologies to provide caregivers with access to all critical patient data, anywhere and anytime. Optimum Mobile is a cloud-based solution that intelligently obtains and communicates patient health information from multiple sources to the care providers who require the information. It also serves as a secure hub for the exchange of health information between a variety of community healthcare providers, hospitals and other sites that require secure patient data. The result is real-time access to patient data necessary to make better-informed decisions and improve the quality of patient care.

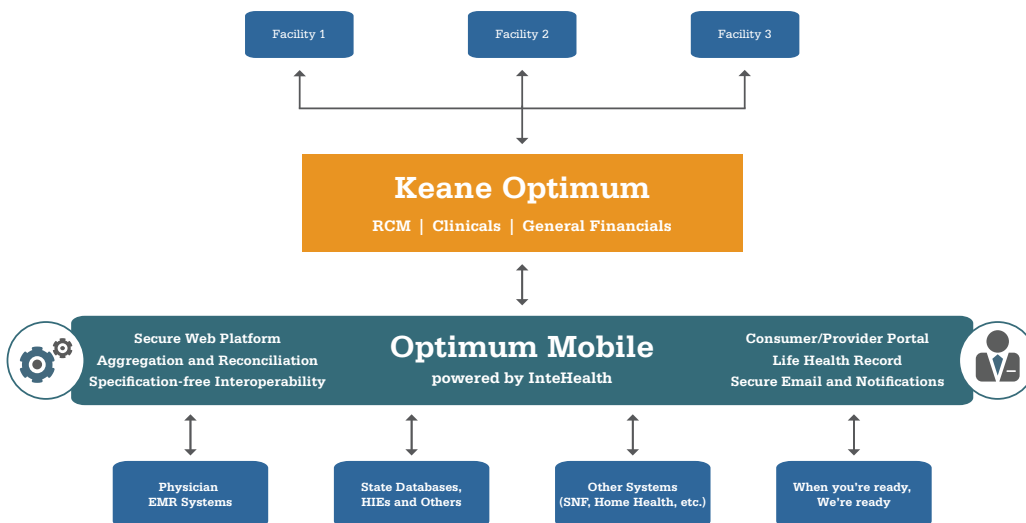

Cloud-based Technology

Optimum Mobile is an ASP-based model that requires no hardware or software installation. Users — including physicians, clinicians, staff, and consumers — access Optimum Mobile from a browser on any Internet-enabled device. With Optimum Mobile, users may share information from all connected systems and vendors through a single interface, improving the workflow of the entire healthcare community.

Leveraging the Cloud to improve patient care.

About Keane Optimum

Keane Optimum serves the needs of the entire enterprise, enhancing revenue cycle management, improving patient care, and driving staff productivity. Featuring a modular suite of revenue cycle and clinical applications, Keane Optimum simplifies the management of the entire healthcare IT environment. This flexibility facilitates compliance with new reimbursement models associated with managing collaborative care.

What's Included in Optimum Mobile?

Keane Exchange

Keane Exchange facilitates the secure flow of patient information among healthcare provider organizations such as hospitals, health systems, outpatient centers, skilled nursing facilities, and physician practices.

Using a series of proprietary one-way communication protocols, Keane Exchange moves patient information from one healthcare setting to another, all through its HIPAA-compliant secure technology.

Features

- » Receipt of data in any format without restriction (source vendor-agnostic)
- » Distribution of patient demographic and results data to the patient's EHR
- » Smart outbound data formatting without restriction to meet the specifications of the receiving vendor (outbound vendor-agnostic)
- » Patient record number cross-reference, for identification and tagging of the patient record with a site-specific patient ID

Keane Exchange also promotes a "one-to-many" structure, where a single data feed from an organization can be distributed to multiple sites, offices, and systems.

Keane Alert

Keane Alert is a rules-based clinical notification and alerting system, set up and maintained by the clinical user from any Internet-enabled device. With Keane Alert, clinicians establish their notification criteria minimizing the risk of "alert fatigue." They are alerted in real time when a patient or clinical value meets those criteria. Virtually any clinical data element,

including laboratory values and patient assignments, can be established as an "Alert," expediting care and insuring accurate treatment plans.

Features

- » User controls for notification by patient or healthcare clinician
- » User preference for alert delivery (email, text, pager, fax, smartphone, mobile phone)
- » User-defined ranges for results
- » Notification of abnormal, panic, STAT, or user-defined laboratory values

Keane Portal

Optimum Mobile distributes patient information and clinical values to the community beyond the four walls of the source organization. Emerging care and reimbursement models such as the Medical Home, Accountable Care Organization, and Accountable Health Organization will all require a more collaborative care approach. Optimum Mobile supports the need to access and share data, regardless of vendor platform or database architecture. The portal also provides the secure sharing of all pertinent patient information to the appropriate care providers and clinicians — when, where, and how they need it. Improved clinical collaboration leads to improved and measureable clinical outcomes.
